(WHEREUPON, this portion of the proceedings began at 6:38 p.m., after which the following transpired:)

MR. GRUZA: So my name is Sy Gruza.

I'm the environmental attorney for PSEG Long

Island, and I want to welcome you to tonight's public hearing.

As I'm sure you're all aware, LIPA has proposed to install a 69kv underground transmission line between the Buell and Bridgehampton Substations, and PSEG Long Island as agent for LIPA has prepared a Draft Environmental Impact Statement that's available online that you can review.

The public hearing tonight is an opportunity for you to provide us with your comments on the proposed action and on the DEIS.

We have a court reporter with us. She'll be creating a transcript for us. We'll have a record of all of your comments.

We will provide a written response to all of the comments as part of the Final Environmental Impact Statement that we'll be

preparing after this hearing over the next couple of months.

I want to -- this is not the end of the public comment period. The public comment period is actually going to run through

July 12th. So if you think of other statements or comments or questions that you want to have answered in the Final Environmental Impact

Statement you can submit them up to July 12th, and we'll treat them the same way we would treat any of the comments that are made here tonight.

We're going to limit the comments to three minutes per person in order to make sure that everyone has an opportunity to speak.

We're going to call people to make their comments in the order that they're listed on the sign-up sheet. If you haven't signed up to make a comment and you want to, the sign-up sheet is over by the table to my left.

Also we probably have people participating virtually, and at the end of the comments from the people who are here in the room, we will -- the people who are virtually

participating will have an opportunity to make their comments, also.

I'd like to hand this over now to my colleague, Lara Urbat, who'll give a brief overview of the project.

MS. PUMI-URBAT: Thank you, Sy. I apologize. Bill, does he have -- there's a presentation that was supposed to be up on the screen for everybody to see.

Apologies. We're just waiting to get the presentation loaded up. Just bear with us a second.

MALE VOICE: You have three minutes to get it together.

MS. PUMI-URBAT: Bear with us.

Apologies. It's always technical difficulties.

So good evening, everybody. I just want to give you a brief overview of the project and what you'll be commenting on this evening. Particularly if you didn't have the opportunity to walk around during our public information session and view the boards that we've prepared.

So just a little bit of background on

the project. PSEG Long Island as agent for the LIPA, the Long Island Power Authority, is responsible to ensure that we provide safe and reliable electricity to our customers.

The South Fork --

MALE VOICE: Speak into the mic.

MALE VOICE: Louder.

FEMALE VOICE: Can't hear you.

MS. PUMI-URBAT: Is that better?

The South Fork load has been growing steadily over the past number of years, and we have identified the need to be able to provide additional power suites on the South Fork. So that's the impetus for this project.

The project goes between our Bridgehampton Substation and our Buell Substation, and it's about 5.2 miles in length.

We're going to be using two construction methodologies to install the project. So horizontal directional drill, and that's going to be utilized beneath the Long Pond Greenbelt, and also for a portion of the project that is beneath the Long Island Railroad tracks close to our Buell Substation.

The remainder of the project will be installed via open trench.

So due to the potential for significant environmental impact, especially with the Eastern tiger salamander, LIPA issued a positive declaration on this project. That positive declaration triggered the Draft Environmental Impact Statement, which was prepared and accepted by LIPA on May 18th.

The Draft Environmental Impact
Statement analyzes a variety of both natural
and human resources. That includes both soils,
topography, water resources, ecology, noise,
traffic impact, cultural resources, and impacts
to the coastal soil.

It also analyzed five alternatives, which are available on the boards in the back if you'd like to look at those in more detail.

In terms of some of the more important points of the project we have designed mitigation for any impacts to the Eastern tiger salamander. That includes revegetation and restoration of suboptimal habitat for that species, and we have also

designed construction methodology to minimize disturbance in the area.

25

So again, just to reiterate what Sy had discussed. This is just one step of the process. What we are here to do tonight is to receive your comments. Those comments are going to be recorded, and then we will address them in the Final Environmental Impact Statement. The comment period is open from July 12th, and we do have a variety of ways that you can submit comments. You can submit them this evening, via email, or via mail, and the way you can submit them is provided on the fact sheets that are available on the round table.

So at this point I think we would like to invite our first commenter up to provide their comments.

MR. GRUZA: So when you're called to offer your comments you can make them from the podium. There's a microphone there.

THE ANNOUNCER: Our first commenter is New York State Assembly Member, Fred Thiele.

ASSEMBLYMAN THIELE: I'm going to get

close because it sounds like you need to with the microphone.

So thank you very much, and it's an important project we're here to talk about tonight. My name is Fred Thiele. I'm the New York State Assemblyman for the 1st Assembly District, which includes all of the Town of East Hampton, all the Town of Southampton, the Town of Shelter Island, eastern Brook haven. All of this project is included within my Assembly District, and I'm going to use my three minutes to kind of summarize my basic feelings about this. I will be submitting more detailed, written comments to you.

And let me just say at the outset that when it comes to Long Pond Greenbelt I'm protective of this resource because it is a critical area of open space within my Assembly District that I take very seriously, but it's also extremely personal to me. I live in Sag Harbor. I grew up in the Long Pond Greenbelt. My introduction to nature really came from walking in the Long Pond Greenbelt with my father. I recognize what an important

recreational and ecological resource it is because I live it and I continue to live it every single day.

But in my role as an elected official, I'm also mindful of the fact that between the state of New York, the County of Suffolk, the Town of Southampton, the Nature Conservancy, the Peconic Land Trust, literally tens of millions of dollars have been spent of public money to protect the resource that is the Long Pond Greenbelt, which is a chain of coastal ponds that runs all the way from Sag Harbor all the way to the ocean in Sagaponack.

And it is a critical resource. It is not just the Eastern tiger salamander. I know that that might have triggered in your mind the need for an Environmental Impact Statement, but this resource is so such more. It has species of global significance. It is an area that lends itself to not just the appreciation of nature but recreation. It is one of a kind and it can't be replaced.

And that is why in my comments with regard to this particular project that, you

know, the SEQRA process to me -- you know, you've got 213 pages there. There's a whole encyclopedia of information about the area. But the critical part of any Environmental Impact Statement is the mitigative measures and the alternatives. And in my statements about this project, because of the critical nature of the Long Pond Greenbelt, this alternative should be the alternative of last resort and we should be looking -- we should be looking at ways to avoid any impacts here in the Long Pond Greenbelt.

And I hope that this SEQRA process is a very interactive process between PSEG and LIPA and the community. I've seen a lot of times with the SEQRA process where you do the draft, we have a hearing, we make comments, you respond to the comments, there's a Final Environmental Impact Statement, and the decision is made.

I invite you, and I know County

Legislator Bridget Fleming feels the same way

and she'll speak for herself, but we want to

engage in a continuing process with you. As

PH-2

PH-3

you said we're at the Draft Environmental
Impact Statement process. We want you to come
back and work with us and work with the
community to look at all the options, all the
alternatives, all of the mitigative measures
that may be available here and to see if we can
find some consensus as to how to proceed with
LIPA and PSEG meeting its responsibility to
provide electricity to people here on the South
Fork.

So, you know, I've read the
Environmental Impact Statement. I think
there's more to be done as far as, certainly as
I've said, mitigative measures. You know, I've
looked at the alternatives that you've
presented. I will acknowledge that all of
these alternatives have issues. But we need to
work together, and this needs to be a
collaborative process to reach a solution that
protects everything that is special about the
Long Pond Greenbelt.

Too much work, too much effort by people in this room that volunteer their time, that work literally day and night and have done

PH-5

PH-6

PH-7

so for decades. First to see the land preserved, then to see it properly managed so that the public can enjoy it. You can't have a project coming in that destroys those efforts that have been made for so many, many years.

So I invite you to work with the community, to work with the elected officials that represent the community, to look at alternatives and solutions -- and I think you'll hear some tonight, some other options and some other suggestions -- so that when we get to the Final Environmental Impact Statement process and when it gets to the decision-making time for a project like this, we have all worked together and we've gotten what is not just the best result for PSEG and its stockholders, but what is the best result for the community here on the East End and on the South Fork. Thank you.

THE ANNOUNCER: Legislator Fleming.

LEGISLATOR FLEMING: Thank you, Fred, for your continued leadership and for all you've done to preserve open space here on Long Island.

I'm Legislator Bridget Fleming. I serve this district in the Suffolk County Legislature.

Beginning in 1968, 1968, through a chain of land acquisitions Suffolk County, the Nature Conservancy, and the Town of Southampton have preserved and protected over 600 acres of land that stretches from Otter Pond in Sag Harbor to Sagaponack Pond in Sagaponack known as the Long Pond Greenbelt. And I would reiterate and echo what my colleague Fred Thiele said. It's not only about the Eastern tiger salamander.

The Long Pond Greenbelt is a unique expanse of interconnected coastal plain ponds, freshwater swamps, wetlands, fields, and woodlands, supporting one of the highest concentrations of rare species and natural communities anywhere in New York State.

I'm sure you'll hear one of the greatest things about representing this community is we have an abundance of very smart, committed scientists and environmentalists. I'm sure you will hear from

PH-10

them with regard to the alternatives and the specific impacts to the aquifer to open space to wildlife habitat and to the protected species.

But I will say that looking at the alternatives in the EIS I would agree that there are no good alternatives to this project, and I'm sure you're going to hear from others on that. So I want to confine my comments just so that the record is complete on just one particular concern that I have.

The proposed action is claimed to be needed to support forecasted electric load growth. And I'll say that year in and year out we have seen from LIPA consistent patterns of dramatic projections of future load requirements that are subsequently reduced.

Particularly, we have seen now dramatic reductions that are driven by greater adoption of energy efficiency and alternative sources such as rooftop solar, which balance Long Island's electric grid. And, in fact, in the 2017 Southampton Press reported that a house built at that time in 2017 used less than half

PH-12

PH-13

PH-14

(cont'd)

PH-15

PH-16

2 as much energy as similarly sized houses built 3 just 10 years prior. And a quarter less than 4 similarly sized houses in the 1980's. As reflected in Long Island's peak 5 load forecast update, your document of 6 March 2020, we've already seen drastic 8 reduction from almost 75,000 megawatts 9 projected in 2013 to less than 5,000 megawatts 10 for what was 2020. And the new peak load forecast for 2030 is approximately 340 11 megawatts lower than that years forecast. 12 13 At the county level alone energy efficiency projects are making drastic 14 15 reductions in the seven cogeneration projects 16 that are currently in planning or implementation for large county buildings are 17 projected to reduce CO2 emissions by some 1,800 18 19 metric tons. We don't measure it in kilowatt 20 hours. But certainly that --21 (Noise disruption.) 22 MALE VOICE: That's another issue. 23 LEGISLATOR FLEMING: That's another public hearing. Stay tuned. 24 25 I am, I have to say, I am concerned

that as Fred pointed out, you know, we've seen this again and again and again. Careful presentations, SEQRA analysis, and something that we know is going to have a dramatic impact on something that we love, something that is rare throughout New York State, and I would say throughout the entire region.

Since 1968, we have been working and spending millions to preserve this, and it's not just for the salamander. I am concerned that I hear it already being talked about as a fait accompli.

I do believe as Fred -- but I've also been in many, you know, government projects where I have seen subtle and nuanced approaches to the specifics, whether it's the transmission distribution that are your goals for this project or whether it is the specific amount of a peak load that you're trying to meet or whether it is the specific technology that you attempt to use for accomplishing these goals. There are tweak and changes and nuances that can be built into those programs if you don't think of it already as a fait accompli.

PH-17

What you are proposing here is going to have a dramatic and I dare say unacceptable impact to our natural environment, and it's got to be rethought.

Thank you.

THE ANNOUNCER: Next we have Natalie Ryan.

MS. RYAN: Hi. Good evening. My name is Natalie Ryan. I'm a Long Island Community Partnership Manager for the Nature Conservancy.

Okay. The Nature Conservancy wishes to express our concern regarding the proposed PSEG Bridgehampton-To-Buell underground cable project.

The Long Pond Greenbelt has a long history of public support to protect it, as we can see tonight, and together we have a multitude of partners, including Suffolk County and the Town of Southampton. The Conservancy succeeded in preserving over 600 acres of this unique and important continuous chain of coastal plain ponds in an area of intense developmental pressure.

2 The Long Pond Greenbelt is a unique 3 expanse of interconnect coastal plain ponds, 4 freshwater swamps, wetlands, fields, and 5 woodland as Legislator Fleming pointed out. PH-18 6 This supports one of the highest concentrations of rare species and natural communities 8 anywhere in New York State, including at least 9 three known breeding ponds of the New York 10 State endangered tiger salamander. Additionally, the New York Natural 11 Heritage Program has identified significant 12 PH-19 13 natural communities and reference of 14 rare, threatened, and endangered species on or in the 14 vicinity of the proposed project route. 15 16 While much of the proposed work is subsurface, this project may impact the 17 PH-20 18 hydrology of this important freshwater system 19 that many of these species are dependent upon. We urge every measure of caution to 20 PH-21 21 mitigate this potential impact. 22 The Conservancy understands and 23 appreciates the need for new electric PH-22 transmission infrastructure as we transition to 2.4

more renewable energy sources; however,

25

ensuring that environmentally sensitive areas, such as the Long Pond Greenbelt, are protected must be considered inside the new transmission projects to meet this increasing demand.

Especially when other, lesser damaging alternatives exist, such as local road right-of-ways.

The Conservancy requests that the alternative routes be fully explored and exhausted before consideration is given to PSEG's preferred route from in the vicinity of the environmentally sensitive Long Pond Greenbelt.

Thank you.

THE ANNOUNCER: Bob DeLuca.

MS. BURMEISTER: Good evening and thank you very much. My name is Bob DeLuca, and I serve as President of Group for the East End. On behalf of the Group I appreciate the opportunity to provide comments on the Draft Environmental Impact Statement for Bridgehampton-Buell Transmission Line.

For the record, the Group for the East End was founded in Bridgehampton in 1972,

PH-22 (cont'd)

PH3-2

with the professionally staffed environmental advocacy and educational organization, representing in the conservation and community planning interests of several thousand member's households, community organizations, and individuals from across the East End of Long Island.

For my part I have served as a conservation biologist professor and land-use practitioner in this region for the last 40 years. I think I can probably save time by stipulating that everything which has been said I agree with, and I just want to drill down a little bit more on a couple of the specifics here.

First and foremost we would agree that if there was a workable and economically responsible strategy to redirect this proposal away from the Greenbelt we would support that measure. We also know that there's a lot of considerations involved and we're sort of in a position of looking at trying to get the least worst alternative, which I understand is a problem for everybody. But nonetheless, to the

PH-25

extent that this project can be moved outside 2 of the Greenbelt, that would be our first 4 priority.

3

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

PH-27

Now that being said I've looked at all the alternatives, and I hope that I can narrow and focus you on a few of them.

With respect to the Northern Underground Route, although it does get you kind of outside the Greenbelt, one of the things that is evident in the Impact Statement is what you need to go through to get that the Village of Sag Harbor, with the houses and residential areas that you would need to go through, is probably next to impossible. Alternative 2 from our perspective is probably not something that we could support, and I don't think it would work with your needs and time limits.

PH-28

With respect to the Southern Underground Route that proposal, although it's also operating in a right-of-way and clearly there could be some impacted residences, it does have an advantage over Alternative 2 due to the less complicated route that it takes,

fewer jurisdictional boundary issues, and its greater confinement of major roadways, which reduces potential impacts on residential areas. That said, it's still 43 percent longer than the action that you want to do but it is outside the Greenbelt, and we suggest that this alternative remain under consideration.

2.4

With respect to the Northern Hybrid Route, take a look at that proposal. The extensive replacement of poles and the installation of more intrusive poles and highway visibilities all along will create complication and enhance through the Village that I don't think most folks will find acceptable. I think there's a higher visual impact, and we don't support further consideration of Alternative 4.

With respect to the Overhead Route within LIPA Easement, this is Alternative 5, this one seems to kind of have the worst of all features if you take a look at it. And it's got 134 new steel poles, 65 feet above grade, 50 feet below grade, coupled with construction activities involving cranes and other

PH-29 (cont'd)

PH-30

PH-31

equipment, and I would say that you would -- ask you to abandon further consideration of that alternative.

But here's the thing. How does all of that stack up against what it is you've proposed to do? And I think here is where the kind of narrowing needs to take place. As a general statement, yeah, the route is shorter, it probably is less obtrusive to individual residences, you can make a case here for directional drilling, and it can be more cost effective than what I've seen represented in the DEIS.

But think about what we're talking about here, and if you didn't know it when you got here you've probably heard. About 50 years has been spent trying to take care of this place. Trying to protect it. Trying to make it a relic of a past natural history that has been disappearing. And so, what I would say very bluntly is if you seek to do work in that area LIPA, PSEG, whoever is in charge ultimately needs to consider what it is that you're going through. Not that you can do it

PH-33

from an engineering standpoint, but that you're 2 doing it for this community, which has worked 4 for 50 years to preserve this area.

3

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And one of the suggestions I would make is that you consider a vital environmental benefit fund or an environmental mitigation fund. Something to demonstrate respect and honor the tradition that took place to get the Greenbelt where it is, and allow that independent fund to offset potential impacts directly related to the project and future mitigation and management ease that the Greenbelt has. And I say that only because I'm trying to balance the equities here about everything that you have to look at.

The big thing that I think is missing, and I maybe wouldn't expect it from folks that don't spend as much time here as we do, is the honorable expedition of that Greenbelt means something to people here.

> MR. GRUZA: Four minutes.

MS. BURMEISTER: And so I would ask you to really include that in your thoughts and in your comments when you come back here to

PH-36

answer that. But ditch those other alternatives. Please consider the environmental benefit fund, and I thank you very much for your time.

THE ANNOUNCER: Alice Wainwright.

No? Okay.

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

The next I have is Julie Burmeister.

MS. BURMEISTER: Okay. I'm just an ordinary citizen. My family's been here for over 100 years, and I think it says that we are committed to this area as we can.

And this particular project really horizontally -- I think there was something about it. I had a man come and -- gas -- well, I guess he is. I don't know whether he was. He came and said -- he asked me if he could turn off my gas. And I said, "Turn off the qas? Why would I want to turn off my gas?" Не said, "We're installing a gas line along Ocean Road." I said, "Well, I'm waiting for you come because I can see all the yellow lines on the pavement." And I said, "I don't see any digging going on." He said, "Oh, ma'am, we don't do it that way anymore."

So I said, "Show me how you do it." 2 3 So he took me down and showed me horizontal 4 drilling along the surface area of the road and 5 I was amazed. But when -- and I guess every 6 500 feet or so they made, they dug it down, and connected a chain and they dragged the pipe 8 through. And I thought that was, as a previous 9 science teacher, I thought that was pretty 10 cool. But drilling horizontally on the Long 11 12 Pond Greenbelt, a preserve nature area of pond and woods, to install an electrical 13 14

PH-38

PH-37

and woods, to install an electrical transmission cable is an attack on our environment. It's one thing drilling along Ocean Road. It's another going through a protected -- well, that's already been said.

15

16

17

18

19

20

21

22

23

24

25

PH-39

Protected area is so crazy. The only appropriate place -- horizontal drilling to install a gas and water line and our utilities is a useful technology, but not in an environmentally sensitive area.

PH-40

There is an alternative route,
which -- there are alternative routes which are
longer and more expensive, but we are paying

PH-40 (cont'd)

PH-41

the highest electrical rates in the country and I think somehow you can serve us better with a more positive outreach to the community.

And I have one last thought that:

Has there been a risk analysis done on this

study and what would it cost if a mistake

occurs and the Long Pond Greenbelt is

irreversibly harmed? Has there been any kind

of risk analysis done?

It seems there's a big risk here.

MS. PUMI-URBAT: We're just here to receive comments tonight so any comments are going to be formally responded to in the Final Environmental Impact Statement.

MS. BURMEISTER: That's fine.

I'm a member of the Southampton Town
Sustainability Committee and Bridgehampton
Civic Association, and I hope you all hear our
appeal.

MR. GRUZA: Thank you.

THE ANNOUNCER: Barbara Bornstein.

MS. PUMI-URBAT: And just before you speak. Just for the folks to be aware. We're going to ask that Erin raise his hand when

there's about 30 second left just so you're aware of the time frame, because we do recognize that we do have a lot of people that wish to speak this evening and we want to hear all of you.

MS. BORNSTEIN: Thank you. I'm

Barbara Bornstein. I live in Sagaponack and I

spend a lot of time in the Greenbelt and I'm an

ex-board member of Friends of the Long Pond

Greenbelt.

I probably don't do nearly as much work as other people in this room do to preserve it, but the man and woman hours spent there, as well as the dollars that -- Fred Thiele, thank you and Bridget Fleming and the Nature Conservancy and talked about investing and protecting this area are immense.

So they can all be much more eloquent than I ever could be about the environmental impact; about even the history of it and what we have to lose here. So I'll just point to who has the most to lose here, and it's those two little boys in the back room. In the future we'll be gone and then it's theirs, and

|| |PH-42

we can't clean up a habitat. What you said earlier about, you know, who -- due acclimation [sic], it doesn't happen. You can't restore a vernal pond. You can't fix what is liable to happen here. Even the plan disturbance is bad enough.

Please reconsider. And I haven't had time to look at all the alternatives, so I'll make another statement later in writing. But to quote somebody that I like. "Please don't do it just because you can."

THE ANNOUNCER: Stephen Storch?

MR. STORCH: All right. Stephen

Storch. I live in Water Mill and I've been

living out here for 40-something years. And

this is just a representation of how little

respect you have for how hard people work out

here for the money that they make and that went

into paying taxes that we use to pay for this.

And, you know, there's always an expression from Southampton: People from away. You're not from around here. They always send people that have no stake in what we've created here to do damage. People cutting down trees

to build houses and clearing lots and things like that.

PH-43

And, you know, for this extra electricity are you talking about serving the one percent? Because I don't see any of them here, you know, speaking out against it or speaking for it. They don't want to really show their face in connection to things like this, but they want to reap the benefits of what we have here. You know, buy a lot, build a house, then sell it for big profits on the backs of people that -- you know, we all love it for the same reason. But people that come and sell out and leave, make out.

And we stay here and we're left with more and more burden of traffic and big houses that have to be served by hundreds of people plugging up the roads, coming from away because they can't afford to live here. They've got to come from 40, 50 miles away. Some people come from New York City and New Jersey to work here.

And, you know, it's just a misunderstanding of who we are and what this place is. You're talking about going there and

digging into a place that it's taken nature 15,000 years after the ice age to lay down and build; okay. If you can grok that. You know, 15,000 years ago we were under a two-mile thick sheet of ice here when it stopped. And all this is built up.

And, you know, I work in environment remediation on an organic farm. I work with a lot of different places with a lot of different people and a lot of different environments, and do you have any idea what happens when you directional drill under a pond that's connected to the groundwater? And you, like, put this pipeline of wire through it? Is it gonna make a leak and drain these ponds? You don't --

So these are question that you can't answer because you don't know.

I yield back my time.

THE ANNOUNCER: Ken Dorph?

MR. DORPH: First of all, I can't judge whether the need -- I think Bridget's comment about the need for electricity was very interesting. I can't judge that. Let's hope that the extra electricity will go for

electrical cars and other substitutes for fossil fuel. But even so.

My name is Ken Dorph and I live on one of the houses on Round Pond, which is in the northeast corner of the Long Pond Greenbelt. If you think of it like Central Park, and the Greenbelt is just about the size of Central Park, we live at 110th Street and Fifth Avenue.

My spouse worked for the Nature

Conserve. He had been on the board of Friends

of the Long Pond Greenbelt, so he would have

been intimately involved with this treasure for

over 25 years.

Now to reemphasize; this is not just about salamanders. Just one example. The Greenbelt embraces a stream of coastal plain ponds with their unique fauna. Plants that might be underwater for 10 years and then come up and flower when the water goes down, the water level goes down. Really unusual species.

These coastal plain ponds exist in only three places remaining in the United States: Cape Cod, the New Jersey Pine Barrens,

and right here. And that we would be considering the risks of damaging such a rare environment to me is appalling.

5

PH-46

I'd like to also point out that the PSEG information -- I tried to read it to make sense of things -- was both unconvincing and difficult to understand. And I'm not an idiot. So there were things that I think your presentation could have been a lot more easy to understand. I don't know where it goes underground, I don't know how it gets through the areas within the Greenbelt.

PH-47

The last thing I just want to say is that thinking again about Central Park. you image if we decided to destroy Central Park and put underground lines and cut through Central Park? People would be appalled. Well, this place to us is at least as valuable. Ιt is really our Central Park, and I want you to think about how damaging it is. Most of us here in this room think you should go -- maybe everyone here in this room -- thinks that you Try Alternative 3. should go elsewhere. make a lot more sense.

2

Thank you.

3

THE ANNOUNCER: Frank Quevedo?

4

MR. QUEVEDO: Thank you. My name is

5

6 South Fork Natural History Museum, just located

7

to dig transmission lines under the Long Pond

8

south of the proposed area where you're going

Frank Ouevedo. I'm the executive director of

9

Greenbelt. We do 300 interpretive educational

First and foremost I just want to

10

natural programs a year to families and

thank Dai Dayton, Friends of the Long Pond

group's efforts along with Assemblyman Fred

Thiele, Bridget Fleming, and Bob DeLuca, and

all the environmentalist here on the South Fork

who have worked so diligently over the years to

Greenbelt, for all of her efforts and her

11

children of all ages.

sensitive habitat.

12

13

14

15

16

17

18

19

20

21

22

23

24 25

My background is marine science, and I've been an environmentalist and a bay manager specialist for the Town of East Hampton for over a decade. And I've been the executive director for this wonderful nature education

protect this significant and ecologically

organization known as the South Fork Natural History Museum for 12 years.

So we do surveys for the New York

DEC. We provide data about ecological habitats
here in the Long Pond Greenbelt for assessing
the sensitivity of the environment. The

Eastern tiger salamander breeds in many ponds
throughout the Long Pond Greenbelt and utilizes
a thousand or more feet from its breeding
ponds. I know I read something in an article
that the PSEG was proposing to do this project
500 feet away from the vernal breeding pond.
But in reality they utilize a thousand feet
around their breeding ponds.

Snapping turtles, box turtles, they utilize the habitat. Also travel thousands of feet to lay eggs in outlaying areas. And, you know, with all my experience taking people through the Greenbelt for interpretive programming it is without a doubt the most rewarding place on the east end where I can educate people about how important it is to protect this natural resource.

These animals are -- have evolved

here in this habitat and the animals are glacial dwellers like the gentleman a few speakers ago had said. It's taken thousands of years to evolve and to have this particular habitat, being as significant as it is, and I think, you know, we just need to protect it as best we can.

So on behalf of the entire South Fork
Natural History Society Organization I'm here
to officially oppose the project to run any
power lines through the Long Pond Greenbelt.

One of the things also that I would like to hear about is the future, if this project does go through, of what electromagnetic field interference will do to underground habitat. I don't think that people speak about that. And the hertz -- the hertz on the fauna that are positive in this particular preserve are not, you know, they don't usually hear noise and see things but they react to vibration and transmission cables and electricity, electromagnetic fields through a habitat like this. So I just feel that it's best to hear other alternatives than running

PH-50

cables through this preserve.

Thank you.

THE ANNOUNCER: Meghan Moore?

MS. MOORE: Hi. My name is Meghan
Moore. I'm a property owner with my husband at
21 Merchants Path in Sagaponack not far from
the Haines Path Trailhead to the Long Pond
Greenbelt, and a board member of the Friends of
the Long Pond Greenbelt.

I only just moved out here full time two and-a-half years ago and discovered the Long Pond Greenbelt on walks with my dog, which offered much needed respite from the stress and loneliness of work and working remotely during 2020 and 2021.

I'm here today to voice my opposition to PSEG's proposal to drill through the Greenbelt.

From a simple search of the New York

Department of State web site of Coastal Fish and

Wildlife Assessment Form indicates the Long

Pond Greenbelt is an ecosystem rare in Suffolk

County and provides important habitat for the

wide variety of fish and wildlife species. The

Long Pond Greenbelt site is included in the

Southampton Greenbelt important bird area. The

Long Pond Greenbelt is recognized by the U.S.

Fish and Wildlife Service as a priority wetland

complex under the federal Emergency Wetlands

Resources Act of 1986.

The New York Natural Heritage Program in conjuncture with the Nature Conservancy recognizes the greater Long Pond Greenbelt Complex, including the Long Pond Greenbelt, Slate Pond, Black Pond Bridgehampton, and little Poxabogue Pond, as priority site for biodiversity.

And as we all know, the area that is proposed drilling is a habitat to the Eastern tiger salamander, which the New York Department of Environmental Conservation web site says that "Loss of habitat has been responsible for the extirpation of this species from heavily developed western Long Island. Recent surveys have identified about 90 breeding ponds in New York, confined to Nassau County and Suffolk County. Its status at these remaining sites is tenuous because of pesticides and other

contaminants, threat of development, and other land use patterns." Again, excerpts from the Wildlife and Coastal Form.

13

14

15

16

17

18

19

20

21

22

23

24

25

Any activity that would substantially degrade the water quality in the ponds, streams, and wetlands of the Long Pond Greenbelt would have significant impacts on the biological productivity of this area. All species of fish and wildlife would be adversely affected by water pollution, such as chemical contamination, oils spills, excessive turbidity or sedimentation, waste disposal, and airborne pollution. Significant changes in the water quality or hydrologic regime of the coastal plain ponds in the Long Pond Greenbelt would result in loss of rare species and degradation of the ecological character and value of pond and pond-shore communities.

Elimination of water or wetland areas through excavation or filling would result in a direct loss of valuable habitat area. The existing hydrology in the Long Pond Greenbelt wetlands should not be disturbed.

The Town of Southampton has

PH-54

recognized the importance of the Greenbelt as a high priority for acquisition.

When you read all of this, and to me, it's just common sense that we should not permit underground drilling through the Greenbelt. While there is information saying that HDD is the least disruptive form of drilling, it is not without risk. And here, even if the probability of unexpected occurrences could reasonably be assessed as low, the magnitude of the possible impact is just too great.

Thank you.

THE ANNOUNCER: Lorena Patino.

MS. PATINO: Thank you. How is everybody? I'd like to introduce myself. I'm very pleased to meet you, my neighbors and community. Thank you very much for this lecture. I just come in from hearing about this reunion. I feel comfortable coming here and speak about the representation of the group I have here [sic].

My name is Lorena Patino. I'm from Mexico, but I work with four different schools

in Europe, in Africa, Mexico, the west coast and east coast.

In this time I'm having here working in different projects and presentations. And with Brunswick School and another firm in Nassau and Bellport, independent with campers [sic] and the farmer's workers and the institution.

I feel like we don't understand that this -- the column of real history, and I'm in here because I found this Long Pond Greenbelt for the greatest period that is here.

For me is like this is a call of mother nature. To me to show this globally as a piece of the rarest places in the world.

That's for you comment like a swamp or like a trail. But for nature, this is example of that too big title feeling; the most incredible architectures in the world.

How tragic to degenerate. I try to create in the looks and the feeling.

I work in Greece. I work also in Poland, in Ukraine. And it is absurd that you don't understand that you have in New York, and

PH-57

PH-58

we are not going to allow that you are using 2 3 the electricity for the wealthy house. 4 I have a solution for you. Sustain 5 the solar. Educate. You want to start a conversation that you want to show this to your 6 7 customers. You have customers in location. 8 We are in the most rare place in the 9 world. That people is creating community with 10 Japan, with Taiwan, people from really high levels of education. And we are also 11 threatened that they are here with us. 12 13 Thank you. I also wanted to reach out. T also 14 wanted to reach in the communion [sic] and we 15 16 are trying to create a community and you have the option to upgraded yourself for the 17 18 community. 19 Thank you. Tom Oleszczuk. 20 THE ANNOUNCER: 21 MR. OLESZCZUK: Thank you. Yes, I 22 think this is better. Okay. My name is Tom 23 Oleszczuk, and my wife and I have been

were drawn here from New York because of its

year-round residents for 10 years plus.

24

natural beauty, and what you've heard so far is a community saying we are concerned. We don't want to risk it.

Now there is, in addition to the natural beauty, there is the Lakota saying (speaking in foreign language) wonders of life. And clearly the natural world out here is partially fed by the ponds that are at risk.

Now I've heard the arguments that,

"Well, you're just drilling through clay and
horizontal drilling -- everything will be

fine," but there is a contemporary warning
here. We heard this argument from the oil
industry when they said, "We have this new
technique. It's called fracking."

Okay. Not to say that you're going to be forcing water into the ground. But the fact of the matter is that this is a sensitive area, and if it's lost because of this technology it really can't be replaced.

But what I would like basically to say is that how many people have you heard speak already? How many have said, "Hey, this is a great idea. Let's go ahead." Now there

may be one or two later on. I don't know. I can't predict that. But the overwhelming opinion of those of us who took time out of our day to come here, the overwhelming opinion is this is not a good idea drilling through.

And what I would like to suggest is take another look at going along established roadways. Okay, so it will cost \$40 million more. We're already paying the highest rates anywhere and it's not as if you're a small company and \$40 million is half of your income. You can do it. And I think it would be a gross disservice to our community if you should proceed as is and drill underneath the Long Pond Greenbelt.

Thank you.

THE ANNOUNCER: We have speakers who have signed up previously. If you're interested in speaking and you haven't signed up, please come over here and I will take your name.

The next person Dai Dayton.

MS. DAYTON: Hello. I'm Dai Dayton from Friends of the Long Pond Greenbelt. We

PH-60

are representing more than 400 members.

20

21

22

23

24

25

The Long Pond Greenbelt, as you've heard, is irreplaceable and your statements that you can fix anything that goes wrong; it's not possible.

First to the west of the turnpike you're going to be affecting the Great Swamp. This is the hydrological area of the Long Pond Greenbelt. This feeds the Long Pond Greenbelt. Your plan is to clear nearly an acre of land and stage this machine that will shoot a drill down an easement, an easement that has a vernal pond right on the easement. You'll be shooting under that and then between Long Pond and Deer Drink and Crooked Pond, which has an active running stream and, again, they are coastal vernal ponds. Then your plan is to continue on and put in a big vault to make the connection from the other side. That will pass right through the wetlands and Long Pond Greenbelt, the actual Long Pond of the Greenbelt.

There is no way you can repair anything that goes wrong with this and you cannot guarantee that something will not go

PH-62

PH-63

wrong. So please consider Alternative Number 3.

PH-65

PH-66

Fred Thiele has helped in the past when these issues come up on Scuttle Hole Road. Giant towers were going to be put in and he worked out something that worked that they could put it underground. We all paid for it, we were all happy to pay for it. And I hope, actually, that Fred could explain how this could be done to pay the extra amount of money to save our Long Pond Greenbelt.

Thank you.

THE ANNOUNCER: Shawn Lawerence.

MR. LAWERENCE: First I wasn't going to give my real name so they didn't turn off my power. Thank you. It is wonderful to be here in the community with everybody here. I was born and raised in Suffolk. Live in Sag Harbor with my family. I'm here for my two daughters, Isabelle and Rosie, who love the Greenbelt very much.

I want to thank our political leaders for standing up for every-day citizens and our environmental leaders, Dai, who is the legend

of this group. Thank you for everything you're doing.

So I run a communications company.

I've been in these rooms, I've looked at this table, and we all know. We see the looks on your faces. We know. You talked about this as a done deal. We know. You guys didn't even introduce yourselves to the room. You don't care.

This is our community. You don't live here. We don't want this thing. We don't want this built like this, and we're going to fight you. And we're going to continue to organize. You have to put out more chairs. You're going to have to get some more. We're not going to stop. We're not going to stop. This place is too important. This place is too important to our community, and I think you'll find that this is just the beginning of how we're going to push back and come together and fight this.

So I beg of you to prove me wrong.

Prove to me that you are listening. Prove to this room and our community. I wish, I wish, I

wish you guys spent a little more time on solar power. I wish I could put more solar on my roof, but I'm told you guys kept me from doing that. I mean, come on guys.

So, please, prove us wrong. Work with us. Help protect this really important place.

Thank you very much.

THE ANNOUNCER: Trustee Ann Welker.

TRUSTEE WELKER: Good evening. name is Ann Welker. I'm a Southampton Town I'd like to thank not only PSEG for Trustee. being here this evening and for granting us the opportunity to speak, as you've heard our community is speaking loudly. I'd also like to thank Dai Dayton and the Friends of the Long Pond Greenbelt. 25 years of environmental advocacy. That's a long record. And it would be a shame to ruin it with this proposed project.

It's interesting that as a connector for the wind farm to western power sources there is the potential here to have things go wrong and the -- I don't really like this word,

but the optics of that for PSEG, I hope that you're considering that.

I took a moment -- so the Town

Trustees, Southampton Town Trustees, were
created by a land grant from the King of

England back in 1686, and as part of that
doctrine the bottomlands of freshwater bodies
and streams are under the custody and care and
control of the Town Trustees. So in looking at
the water and the issues with the coastal ponds
and the potential for problematic situations I
especially looked at Appendix 1 [sic].

The title of Appendix 1, being a

Frac-Out Contingency Plan. And there are many
concerning issues to me when I'm looking at
this contingency plan. And I just wanted to
make sure that as you're going through and
making statements such as, "The primary
environment impact potentially associated with
HDD is the inadvertent release of drilling
fluids or mud (water/bentonite mixture) to the
surface during construction (sometimes referred
to as "frac-out")."

In reading further to discover what

frac-out is and what the potential could be for that to these fragile, as you've heard many times tonight, very environmentally sensitive coastal plain ponds and the critters and plants that live in them. There's a great danger here.

So I strongly urge you to, on part of this community -- and you can hear. This is a passionate community. And we are just a small snapshot representing others who could not be here this evening. I strongly urge you on behalf of the Southampton Town of Trustees and many others in this community, to consider Alternative Number 3, The Southern Underground Route.

Thank you.

THE ANNOUNCER: Kate Emilio.

MS. EMILIO: My name is Kate Emilio.

As someone said earlier, I come from away. And

22 years ago we purchased a place here in Sag

Harbor, and we've become acquainted with what

everyone loves about this place. And this

whole thing reminds me of a story.

The place we come from away from is

place called Willistown. And I remember getting a phone call -- we lived outside of Philadelphia in an agricultural area. It was just beautiful. Hard to leave but this place allured us here.

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And one of the farmers allowed Philadelphia Suburban Water Company to come in Well, all of a sudden and drill test wells. folk's ponds were getting lower and the water table was changing and all kinds of things going on. And I worked in the neighborhood. Ι worked for a place called Smith Pine Animal Health Products. I was a physiologist there and designed artificial animal models. And I didn't know a lot about ecology but I knew different environmental assessments and all kinds of things when we would send stuff to the Center of Preventive Medicine and the FDA.

So I said I'd take a look at it and basically what they were doing -- these test wells were turning into profit centers where they were sending water elsewhere. And, you know, we went to a PSEG -- not a PSEG. Excuse me. We went to Philadelphia Suburban Water and

they looked at me and they said, "Oh, yeah.

Well, we're -- tell you what, Katy. If you've got the money we've got the time." And I said, "Okay."

So we decided that we'd take the time to reach out to their shareholders. And we found that a lot of their shareholders were stakeholders. And they cared. They were away from where we lived, but they did care. And Philadelphia Suburban and Water, the burden of proof was changed so that they had to prove that they weren't causing the environmental damage and Willistown Conservation Trust was born and it's an absolutely fabulous, pristine area because some of the from-away shareholders cared.

THE ANNOUNCER: Jose Arandia.

MR. ARANDIA: Good evening, and I'm glad you're here to listen today. I'm a Wainscott resident. I'm not going to speak about any of the scientific elements of this project that other neighbors, and residents have spoken about. But I am going to speak about the four points that I think are a sense

of the obvious and common sense.

The first one being that the need for this additional cable project is not proven.

Not from your presentation, not from what's been said. I've sat at your side of the table. My life has been in marketing. So I have created those presentations. I've made the selling points. You have not made your selling point. Certainly not with what we've seen here tonight.

Number two. The need for -- sorry. Any kind of ground disturbance, no matter how minimal, is still going to be a ground disturbance. And a little ground disturbance will have an impact. Maybe not seen on the surface right away, but it's impossible to disturb the land underneath, especially by bodies of water, and not anticipate that this is going to have a very serious impact. And will in some one -- in some form collapse and hopefully it's not going to collapse on us.

My third point, and this is very important because we've had any number of corporations come into the area of Suffolk and

PH-72

the area east of the canal wanting to do improvement projects for us. Not the least of which is the wind project, but that's for another meeting. The mitigation which is offered is not a viable option because there's no way that we will know exactly what it's going to cost. And I don't want you to put more money into it than you need to for a mitigation factor, but I also don't want you putting in any less money than would be necessary. So I don't think it's even a consideration that you're offering mitigation because that will not be viable.

Fourth. The best mitigation is to not disturb the environment. This is -- this cable system is not necessary.

So with those four points I end with I do not support this project.

THE ANNOUNCER: Carolyn Logan Gluck.

MS. LOGAN GLUCK: My name is Carolyn Logan Gluck. I live in Wainscott, and I just wanted to comment briefly because I've spent since January of this year serving a company contractor like PSEG, installing conduits for

PH-74

an electrical cable. And I've watched vaults being installed and I've watched trees being taken down along the Long Island Rail Road in order to accommodate what was needed for transportation to continue the cable to the Cohalan [phonetic] Substation.

To think that work of this nature would be conducted through the Long Pond Greenbelt and along the -- what you claim to be the right-of-way where the overhead power line is is disturbing to me because even if it is a right-of-way, even if there are already established infrastructure going through part of the route that you've outline, it still will be immensely disturbing to the natural ecology that's there today.

Like my predecessors here at the mic, Jose, I, too, question the need of this project. But if, in fact, that's not enough to stop it, which I doubt it is, I do hope that you would go to the expense of installing the cable along the Montauk Highway where it would be the least disturbing to our ecology.

Thank you.

PH-76

PH-78

2 THE ANNOUNCER: We'll now be engaging 3 with our zoom participants. One moment please. 4 MS. PUMI-URBAT: Can we also address 5 the volume of the zoom participants, please, 6 just so the reporter can hear and adequately 7 record the comments. 8 THE ANNOUNCER: One moment please. 9 State your name for the record please. 10 MS. POWERS: My name is Jess Powers. Thank you to everyone who is there in person. 11 I wasn't able to be there due to an injury and 12 13 otherwise I definitely would. I live in a house that my great 14 15 grandfather bought in Noyack in the 60's. I'm 16 a member of the Friends of the Long Pond Greenbelt and the South Fork Natural History 17 18 Museum, and in my daily work life I see a 19 downstream of shortsighted decision like this on the environment and on the communities 20 across the country. 21 22 There is a viable alternative, and I 23 ask that you go with option number three. And 24 that's all that I have to say.

Thank you so much.

2 MS. PUMI-URBAT: Do we have any other 3 participants? 4 THE ANNOUNCER: We are currently 5 waiting on zoom participants. 6 Could the zoom participant please 7 state your name. 8 MR. MARTIN: Nick Martin. 9 THE ANNOUNCER: And you are live. 10 MR. MARTIN: Thank you. Thank you everyone for this effort. And as a person who 11 lives in the Long Pond Greenbelt and raising a 12 13 family of five here, someone who's involved in construction and architecture, I believe that 14 15 the public may deserve to see additional 16 proposals that would allow for variable options that do not disturb the Long Pond Greenbelt and 17 18 also access to addition Environmental Impact 19 Statements that show the potential issues and ways that this kind of work may disturb our 20 21 fragile ecosystem. 22 It's the very reason why we live here 23 and the very reason why we are all so concerned with this project. I believe that we each 24

PH-79

deserve a sense of different ways of getting to

PH-80

2 the same means. 3 Thank you for your efforts. 4 THE ANNOUNCER: We currently have no 5 other zoom participants at this point who wish We will -- Oh, we have one more. 6 to talk. 7 Could the zoom participant unmute and start their video, please. Please state your 8 9 name. 10 MR. SCHNEIDER: My name is Jay Schneider. 11 THE ANNOUNCER: You are live. 12 13 MR. SCHNEIDER: Okav. I have been a resident of the Greenbelt for 25 years. 14 I have 15 really not much to add to what's been said 16 before. I'd like you to take a look. This is This is the Greenbelt. Lily Pond. This is one 17 18 of the most beautiful places in the world. 19 Leave it alone. 20 Thank you. 21 MS. DODDS: Hi. Thank you. I'm 22 Kelly Dodds. I'm a resident of Sag Harbor, 23 Noyack, and my family's here with me, Jackson and Rowen, my boys. And they are -- we're all 24

members of the Friends of the Long Pond

Greenbelt, all four of us. Rowen actually became a member when he was seven weeks old. That was his first treck, as you might remember.

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So, yeah, we spend a lot of time in the Greenbelt. And I'm not just here to represent my family, but I'm here to represent the many families of Sag Harbor and the East End that come together as a community to use and share and just take a stroll or if we're out there and we see our friends, our neighbors, plenty of dogs and happy people. But we come together probably -- I think there's a hike that's planned maybe once a week, if not more, between SoFo, the South Fork Natural History Museum, and Friends of the Long Pond Greenbelt, and Dai Dayton. We go to, every year, the walk and off-walk the day after Thanksqiving. It's a family tradition, 30 years, whoop whoop.

So, yeah, I'm taking it light but the point that I want to make is that it's not -yes, of course, it's about the Greenbelt and it's about all of the beings, the living

creatures that are there, but it's about the community. It's about the people; us, you know. This is our community. We're representing a sliver of it. You know, there's hundreds of kids that come out and use the Greenbelt, and that's our place where we gather.

And the thought of having it be disturbed in any way, it does feel appealing. Somebody else said that before. And, you know, I noticed one of your options is to not do it. So that's an option, too.

But, you know, to talk about it, you know, like it's happening or to say -- I heard you say earlier, you know, you'll get our follow-up Environmental Impact Statement or whatever it is. Like, we're humans here talking to you. I'm not giving you 30 pieces of paper. I'd like you to come and meet with us, a conversation. Come take a hike with us on the Greenbelt. See what it's all about.

You know, I appreciate that you've done the work here and I've read it and, you know. I just -- I still don't see how the

So I'm

2 Greenbelt is a viable option. But yeah, the kids can't really get up here and speak --4 Do you guys want to say anything? CHILD VOICE: No. All right. MS. DODDS: No. saying it for them, you know, for our kids. Please find another way to accomplish what you need. 10 MR. GRUZA: Are there any other speakers? 11 12 MS. FOSTER: Hi. 13

22

23

24

25

Good evening. Му name is Robin Foster, and I actually have been blessed to live in the community for 56 years. I actually grew up on Sag Pond, an eighth of a mile from the beach. And now I live for over

30 years, I live 4 miles north on Crooked Pond.

So my family has been a part of this community for over a hundred years, and we have worked tirelessly as a farm family to preserve those pristine, amazing acres so that it will be here forever and ever. This was not an expense that somebody just came along and said, "Well, we're just going to pay you to stay on this property." We had to fight to keep it.

2 My father was actually instrumental in gathering farmers to fight the Shoreham 4 Project for LIPA -- against LIPA. Now I see the actual change in the aquifer on Crooked Pond because I am an aware human being. don't have to be a scientist but I see the immense amount of construction and I've seen ponds dry up, including Crooked Pond. 10 had some issues there. And I think it's because there has been cement that has actually been put in everyone's backyard and that water 12 13 has to go somewhere and that's where it's 14 going. And I just feel like if you are not

3

5

sensitive and don't care, this will certainly go away. And I invite you to see any disturbance, you know -- excuse me. You talk about the money it's going to cost if you do a separate, you know, Number 3. Well, I'll tell you something. If there is a mistake it will be absolutely priceless. You won't be able to spend enough money to fix what you've ruined.

PH-84

So spend the extra money and please leave the Greenbelt alone because it is just

the most precious thing that we have right now.

Thank you.

THE ANNOUNCER: Leslie Schultz.

MS. SCHULTZ: Hi. My name is Leslie Schultz. I actually live diagonally across the street from Robin. I came to listen tonight and as I sat and I listened to everyone's comments it just occurred to me that we just -- this is just a nuts situation. This is just absurd that we are even talking about this kind work.

So I live across the street from Crooked Pond, and I have -- when the property was first built in the 1950s's the road was sand and there was a clear view from my -- what is now my house to the pond. It was a beach.

Now it's really grown up and it's, you know, beautiful, green, lush. It also blocks our view. So we called Robin and said, "Robin, what do you think if we do a little trimming?" And she said, "No, no, no, no, no. That's habitat. It's against the law." And we learned from that.

And I see every couple of years PSEG

PH-86

2 come along Crooked Pond and clear some of the 3 overgrowth so it doesn't interfere with the 4 electrical lines, the aboveground electrical 5 lines. And you so -- your guys so -- woman and 6 guys -- so carefully trim those trees because 7 it's a habitat. Because you can't, as a legal 8 matter, disturb the habitat of this land that 9 has been so carefully preserved. 10 So the idea now that you are going to drill -- horizontal, vertically, whatever 11 you're going to do -- is just one of those 12 13 absurdities of life. You can't do it. world is already on fire. We know that. 14 And 15 this is preserved land. 16 Thank you. It looks like there are 17 MR. GRUZA: 18 no additional speakers and if so we're going to 19 close the public hearing. I'd like to thank you all for coming 20 21 and for expressing yourself. Thank you. 22 (WHEREUPON, this public information 23 session was concluded at 8:02 p.m.)
