- Religious Institutions
- Parking Facilities
- Historic/Landmark Rehabilitation

# Mixed Use Electrification

## *Multi-Family and Commercial Heat Pumps*

“PSEG Long Island Commercial Energy Efficiency Program provided excellent consulting services while we applied for the Multi-Family Variable Refrigerant Flow Heat Pump Custom incentive to cut the project cost significantly. The Commercial Efficiency Program staff streamlined the application process by assisting with the required documentation, inspection process and the NYS Clean Heat Calculations. JOBCO Inc, a PSEG Long Island Partner, installed highly efficient VRF systems that provide excellent heating and cooling throughout the residential and commercial spaces, optimizing energy efficiency and minimizing our carbon footprint. I highly recommend the PSEG Long Island Energy Efficiency Program to any Commercial Customer who is interested in upgrading their facility to lower project cost with the incentives provided, along with lowering energy bills and saving energy.”

Steven K. – Silver Lake Realty Group
